

Terraform Task - 2

Installing Terraform:

```
Windows PowerShell x sureshk@SSMS: ~ + v
sureshk@SSMS:~$ wget -O - https://apt.releases.hashicorp.com/gpg | sudo gpg --dearmor -o /usr/share/keyrings/hashicorp-archive-keyring.gpg
echo "deb [arch=$(dpkg --print-architecture) signed-by=/usr/share/keyrings/hashicorp-archive-keyring.gpg] https://apt.releases.hashicorp.com $(lsb_release -cs) main" | sudo tee /etc/apt/sources.list.d/hashicorp.list
sudo apt update && sudo apt install terraform
```

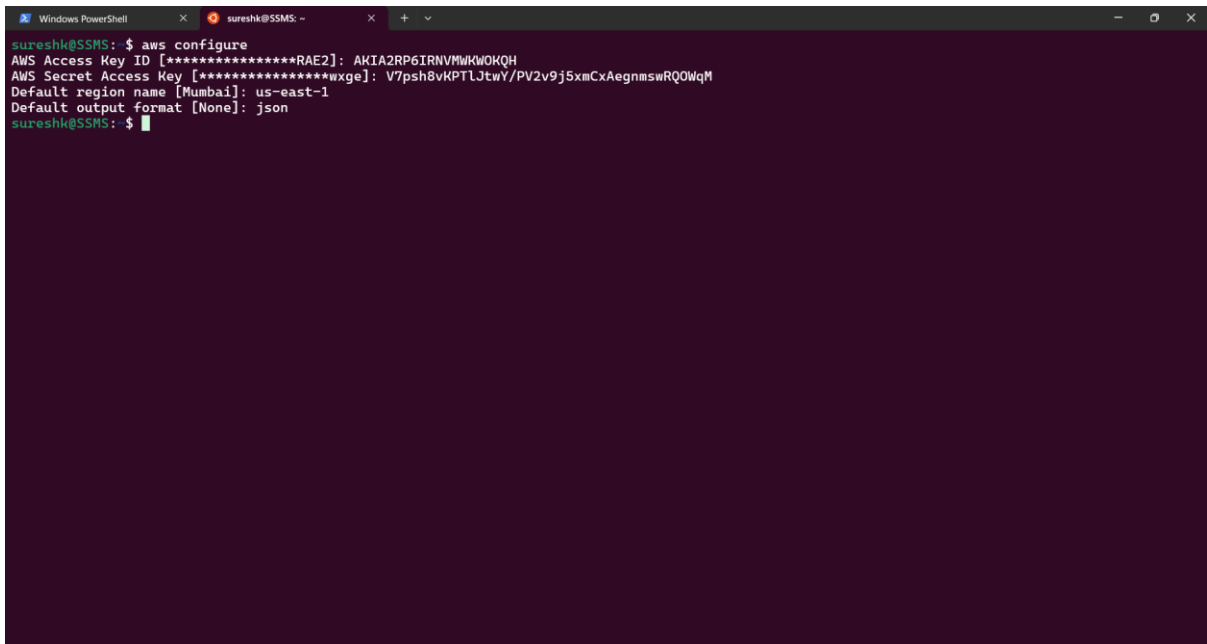

```
Windows PowerShell x sureshk@SSMS: ~ + v
--2025-05-01 10:06:07-- https://apt.releases.hashicorp.com/gpg
File '/usr/share/keyrings/hashicorp-archive-keyring.gpg' exists. Overwrite? (y/N) Resolving apt.releases.hashicorp.com (apt.releases.hashicorp.com)... 18.161.229.91, 18.161.229.45, 18.161.229.117, ...

Building dependency tree... Done
Reading state information... Done
terraform is already the newest version (1.11.4-1).
The following packages were automatically installed and are no longer required:
  libdrm-intel1 libpciaccess0 libsensors-config libsensors5
Use 'sudo apt autoremove' to remove them.
0 upgraded, 0 newly installed, 0 to remove and 12 not upgraded.
sureshk@SSMS:~$
```

Installing AWS CLI:

```
Windows PowerShell
sureshk@SSMS: ~$ aws configure
AWS Access Key ID [*****RAE2]: AKIA2RP6IRNVMMKWOKQH
AWS Secret Access Key [*****wxge]: V7psh8VKPTLJtwY/PV2v9j5xmCxAegnmwRQ0WqM
Default region name [Mumbai]: us-east-1
Default output format [None]: json
sureshk@SSMS: ~$
```

Creating Directory for Terraform:

```
Windows PowerShell
sureshk@SSMS: ~/ec2-multir...$ mkdir ec2-nginx-multiregion
sureshk@SSMS: ~/ec2-multiregion$ cd ec2-nginx-multiregion
sureshk@SSMS: ~/ec2-multiregion/ec2-nginx-multiregion$
```

Creating Terraform main.tf:

```
region = "us-west-2"
}

resource "aws_instance" "ec2_us_east" {
  provider = aws.us_east
  ami      = "ami-0c2b8ca1dad447f8a" # Amazon Linux 2 in us-east-1
  instance_type = "t2.micro"
  user_data = <<-EOF
    #!/bin/bash
    sudo yum update -y
    sudo amazon-linux-extras install nginx1 -y
    sudo systemctl start nginx
    sudo systemctl enable nginx
    echo "Hello from us-east-1" > /usr/share/nginx/html/index.html
  EOF
  tags = {
    Name = "EC2-Nginx-East"
  }
}

resource "aws_instance" "ec2_us_west" {
  provider = aws.us_west
  ami      = "ami-094125af156557ca2" # Amazon Linux 2 in us-west-2
  instance_type = "t2.micro"
  user_data = <<-EOF
    #!/bin/bash
    sudo yum update -y
    sudo amazon-linux-extras install nginx1 -y
    sudo systemctl start nginx
    sudo systemctl enable nginx
    echo "Hello from us-west-2" > /usr/share/nginx/html/index.html
  EOF
  tags = {
    Name = "EC2-Nginx-West"
  }
}

sureshk@SSMS:~/ec2-multiregion/ec2-nginx-multiregion$
```

Initializing Terraform:

```
sureshk@SSMS:~/ec2-multiregion/ec2-nginx-multiregion$ terraform init
Initializing the backend...
Initializing provider plugins...
- Finding latest version of hashicorp/aws...
- Installing hashicorp/aws v5.96.0...
- Installed hashicorp/aws v5.96.0 (signed by HashiCorp)
Terraform has created a lock file .terraform.lock.hcl to record the provider
selections it made above. Include this file in your version control repository
so that Terraform can guarantee to make the same selections by default when
you run "terraform init" in the future.

Terraform has been successfully initialized!

You may now begin working with Terraform. Try running "terraform plan" to see
any changes that are required for your infrastructure. All Terraform commands
should now work.

If you ever set or change modules or backend configuration for Terraform,
rerun this command to reinitialize your working directory. If you forget, other
commands will detect it and remind you to do so if necessary.
sureshk@SSMS:~/ec2-multiregion/ec2-nginx-multiregion$
```

Validating Configuration:

```
Windows PowerShell x sureshk@SSMS: ~/ec2-multir x + v
sureshk@SSMS:~/ec2-multiregion/ec2-nginx-multiregion$ terraform validate
Success! The configuration is valid.

sureshk@SSMS:~/ec2-multiregion/ec2-nginx-multiregion$
```

Terraform Plan:

```
Windows PowerShell x sureshk@SSMS: ~/ec2-multir x + v
+ "Name" = "EC2-Nginx-West"
}
+ tenancy = (known after apply)
+ user_data = "f4bfb19ed7506c62240615f3800b83ebcfffbbelf"
+ user_data_base64 = (known after apply)
+ user_data_replace_on_change = false
+ vpc_security_group_ids = (known after apply)
+ capacity_reservation_specification (known after apply)
+ cpu_options (known after apply)
+ ebs_block_device (known after apply)
+ enclave_options (known after apply)
+ ephemeral_block_device (known after apply)
+ instance_market_options (known after apply)
+ maintenance_options (known after apply)
+ metadata_options (known after apply)
+ network_interface (known after apply)
+ private_dns_name_options (known after apply)
+ root_block_device (known after apply)
}
Plan: 2 to add, 0 to change, 0 to destroy.

Note: You didn't use the -out option to save this plan, so Terraform can't guarantee to take exactly these actions if you run "terraform apply"
now.
sureshk@SSMS:~/ec2-multiregion/ec2-nginx-multiregion$
```

Terraform Apply:

```
Windows PowerShell
sureshk@SSMS: ~/ec2-multin

+ cpu_options (known after apply)
+ ebs_block_device (known after apply)
+ enclave_options (known after apply)
+ ephemeral_block_device (known after apply)
+ instance_market_options (known after apply)
+ maintenance_options (known after apply)
+ metadata_options (known after apply)
+ network_interface (known after apply)
+ private_dns_name_options (known after apply)
+ root_block_device (known after apply)
}

Plan: 2 to add, 0 to change, 0 to destroy.

Do you want to perform these actions?
  Terraform will perform the actions described above.
  Only 'yes' will be accepted to approve.

  Enter a value: yes

aws_instance.ec2_us_east: Creating...
aws_instance.ec2_us_west: Creating...
aws_instance.ec2_us_east: Still creating... [10s elapsed]
aws_instance.ec2_us_west: Still creating... [10s elapsed]
aws_instance.ec2_us_west: Creation complete after 16s [id=i-0fb64c57186db0214]
aws_instance.ec2_us_east: Creation complete after 16s [id=i-0337161a27c9a5620]

Apply complete! Resources: 2 added, 0 changed, 0 destroyed.
sureshk@SSMS:~/ec2-multiregion/ec2-nginx-multiregion$
```

Verifying Deployment:

```
Windows PowerShell
sureshk@SSMS: ~/ec2-multin

sureshk@SSMS:~/ec2-multiregion/ec2-nginx-multiregion$ aws ec2 describe-instances --region us-east-1 --query "Reservations[*].Instances[*].Public
IpAddress" --output text
18.234.84.176
sureshk@SSMS:~/ec2-multiregion/ec2-nginx-multiregion$ aws ec2 describe-instances --region us-west-2 --query "Reservations[*].Instances[*].Public
IpAddress" --output text
35.94.248.150
sureshk@SSMS:~/ec2-multiregion/ec2-nginx-multiregion$
```
